

Intelligent Education Group

E-book

Dedication and Commitment to a paradigm shift! From “teach well” to “learn well”!

E-books play the role of a navigator in the classroom. The quality of teaching is raised through e-book enhanced with audio. This

allows students to quickly understand correct answers from incorrect answers with the touch of a button. The automated reward system of e-books allow students to celebrate their learning milestones, and allow teachers to supervise their learning journeys, giving students the best condition to complete their school work. This inherently transforms the mode of education—from “teach well” to “learn well” , imbuing students with a pro-active attitude.

In recent years, Intelligent Education Group has been actively updating our curriculum planning, making it comprehensive and effective. We upgraded and innovated the “quality management” of our teaching and classroom methods, so as to enhance the interactivity between teachers and students . “Quality Management in Teaching” refers to teachers being able to observe and identify the learning barriers for each student, and provide timely assistance to them to overcome the barriers.

A unique and very effective feature of the IMA e-book is “after-image training” . Through the use of various representative and bead imagery, the visual memory of the right brain is supercharged and enhanced, helping the formation of mental bead images quickly and effectively. Mental refinement is achieved through this continuous and gradual upgrading exercise, enabling students to achieve the benefits and goal of our quality teaching.

“Classroom Quality Management”

“Classroom Quality Management” – IMA e-books are fast and systematic. It automatically times and formulates teaching reports and students’ accuracy rate reports for teachers, saving man hours. And in its place, give teachers the extra time to effectively supervise and guide students in overcoming any obstacles they may face in abacus and mental arithmetic. This ensures that every student can better improve the accuracy rate of their work, develop a positive learning attitude, and enhances the teaching quality of teachers.
